

Short Survey Study of Forensic Expert Opinions

A team at the University of Pennsylvania is seeking those who study, work in, or utilize forensic sciences for a study of expert opinions on the accuracy and variability of forensic methods. The survey is anonymous and requires less than 20 minutes of your time, with most participants completing the survey in under 10 minutes. By participating, you can contribute to our understanding of these key methodologies.

METHODS COVERED

If you have some knowledge of one or more of the following six forensic methodologies, we would like to hear from you:

- Non-Touch DNA Analysis
- Touch DNA Analysis
- Shaken Baby Syndrome/Abusive Head Trauma
- Fingerprint Analysis
- Forensic Pathology
- Firearm/Toolmark Analysis
